Overview:
You must develop a personal website about yourself or something related to yourself! The website should provide internet users with information about you, such as your hobbies and work experience, or you could create a site about something relevant to you, such as your mother and father's business, or the band you are in, or the high school football team you were on, or a favorite sports person or team or musical group, or how to cook...etc. We are quite accommodating in terms of the main content of your website, however please ensure that:

1. there is a component about you (it somehow must be relevant to you)
2. it must be a NEW site that you built for this course(i.e. it can NOT be a site you designed a year ago).
3. all the pages fit together. There is a CLEAR THEME that connects all the pages so that visitors to your site can tell by looking at your home page what your site is all about.

Build a website with the following criteria:

1. Web pages:
    - Home page plus at least FIVE additional web pages, one of which must be your references page. So you must have a home page + four more pages (i.e. each page should have 6 links/buttons on the page)
    - Your home page/start page must be called index.html. The file name*html* must be in lowercase, thus you should have a file called index.html.
    - Use your creativity to layout your website with unique link categories based on your personal experiences. For example you might have links such as "Hobbies", "Family", "Education", etc.
    - You decide on content organization and you must create the link categories you feel are appropriate
2. Navigational structure (i.e. links and link layout):Remember to be consistent on each page and make sure your links are easy to navigate through your entire website not just the home page

Then include references to:

- any graphics you did NOT create yourself
- any typed content you obtained from another site
- any sound/movie clips you used that were not written/created by you
- REFERENCES TO YOUR ORIGINAL NATIVE FILES (your banner.psd file, your animation.fla file, etc....)

HANDING IN YOUR ASSIGNMENT

Follow the instructions from this page - https://pages.github.com/

You will just have to submit your website url not the git link and your git repo should be public and attach your reflective report.

Thank you!
